

Information System Design

29.11.25

information system → collects data
stores "
processes (decision নেওয়া/result)
distributes (result দে)

example: E-classroom
social media
Restaurant management

Components: ① People (not only user)
↳ stake holder, end users
(those people who interacts with the data,
maintains the data (staff operator not developer)
rules decide (managing persons)
process develop (IT professionals)

② processes → data কোন স্টোরে এর সঞ্চয় দিবে যাতে
↳ rules, policy → process এর সঞ্চয় পড়বে
rules, workflow বলা থাকবে

③ Technology → s/w
h/w
Networks

④ Data

⑤ Organizational context

→ company's aspect ও আরও

Information system → socio-technical system
(not s/w)

Food Panda:

① People:

Restaurant owner

consumer

delivery man

help center supporter

② Processes:

order place

" accept

owner order ready করে

handover করে delivery man কে

③ Technology : mobile device

server

database

app

otp

} Payment gateway

④ Data : menu

address, credit card no.

individual identification.

⑤ Organizational Context : share third party পরে

Context

additional operational cost

hygiene maintain

Good Design:

System Development Lifecycle:

1. problem space identify → social media (not a good space, already saturated, currently available platform যুগ্ম অনুসন্ধান need fulfill করছে।)

. (যেখানে solution উদ্ভাবন নষ্ট)

2. চাঙ্কিত বোঝায় যেখানে technology role play করবে।
barrier

3. user requirement গিয়া data analyse

user 1 বনাম red

2 ss green

} → color variation নাকিবে

4. diagram

5. develop and documentation

6. Testing

7. implement and evaluating the system.

(maintenance → lifelong process)

Week -03 → (CT)

Requirement Analysis
