

Introduction

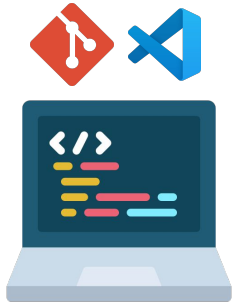

Mahir Labib Dihan
Lecturer, CSE, BUET

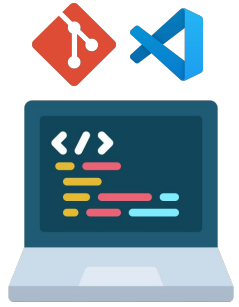

Objective

*How to build systems that actually works in the real world,
not just on your laptop*

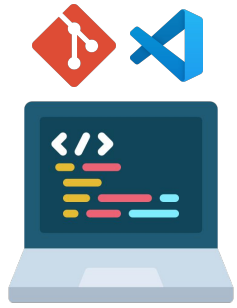

Every system starts very simply.
A developer writes code and runs the
application on their own computer.

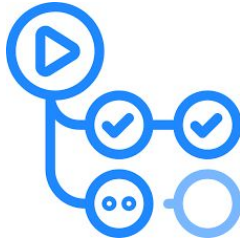

To work as a team, we store code in a central repository, such as GitHub.

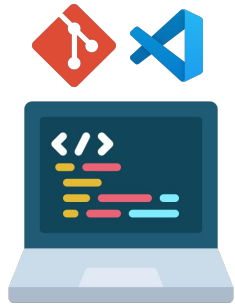

Repository

Our first key idea is CI/CD pipeline.

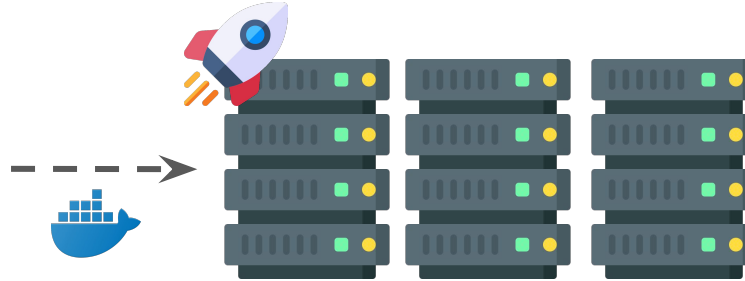

CI/CD

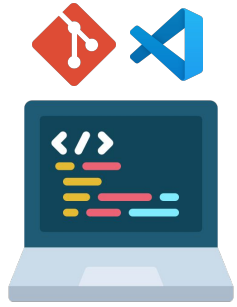

This ensures that our code goes from the repository through a series of tests and pipeline checks and onto the production server without any manual intervention.

CI/CD

Production Servers

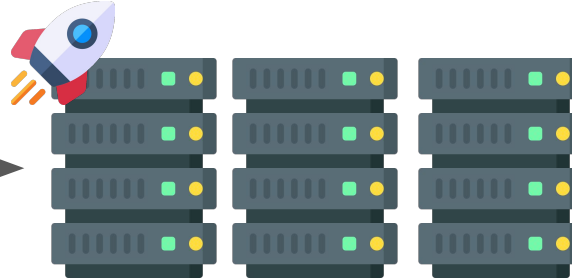

Once our app is in production it has to handle lots of user requests.

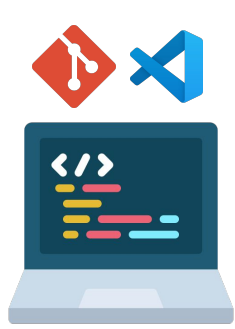

Repository

CI/CD

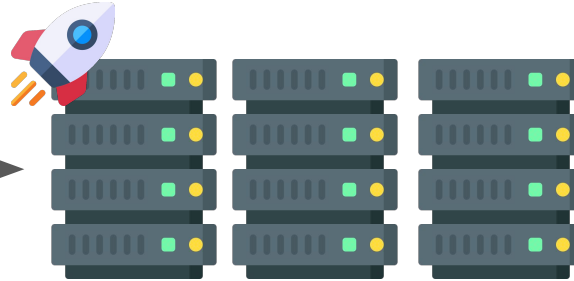

Production Servers

Repository

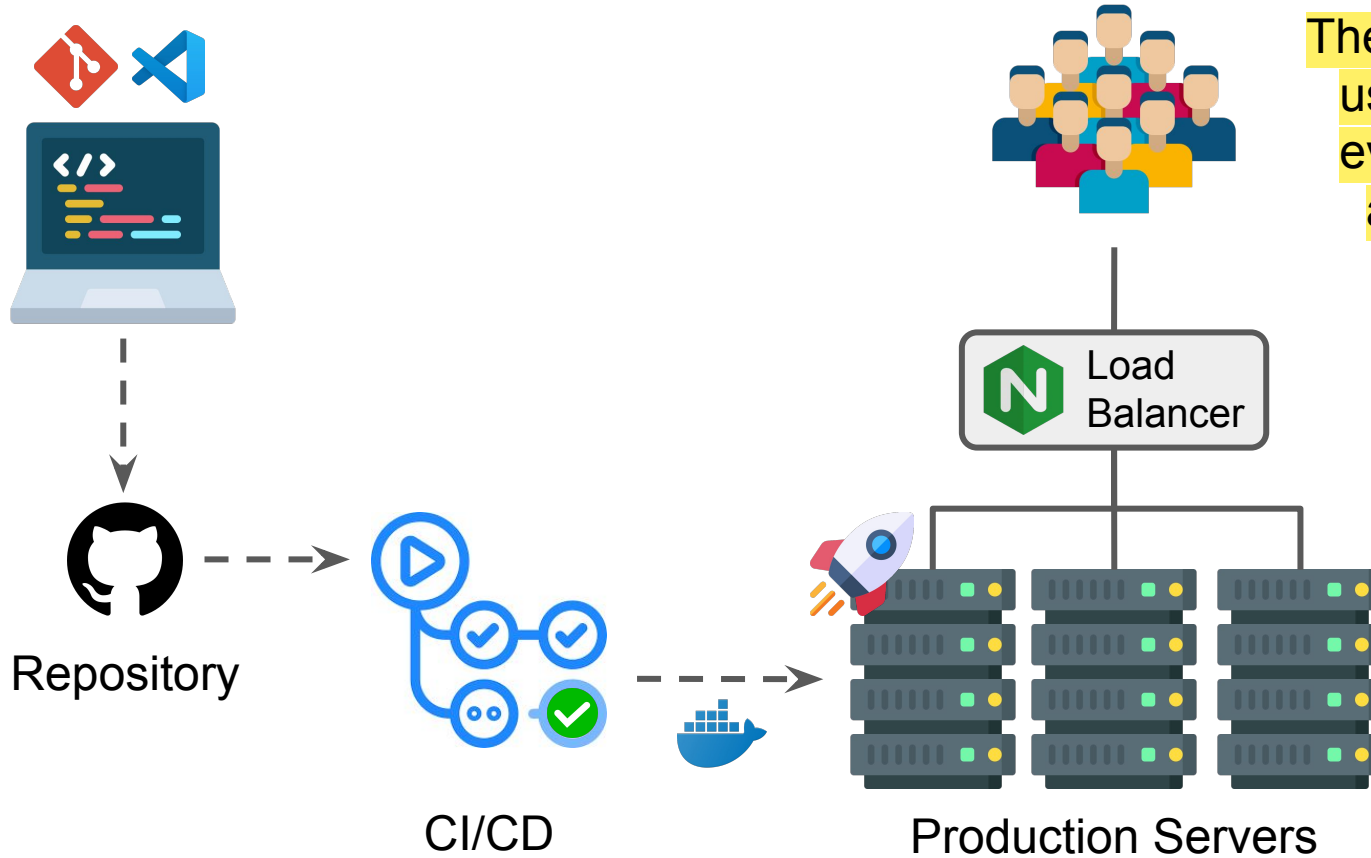

CI/CD

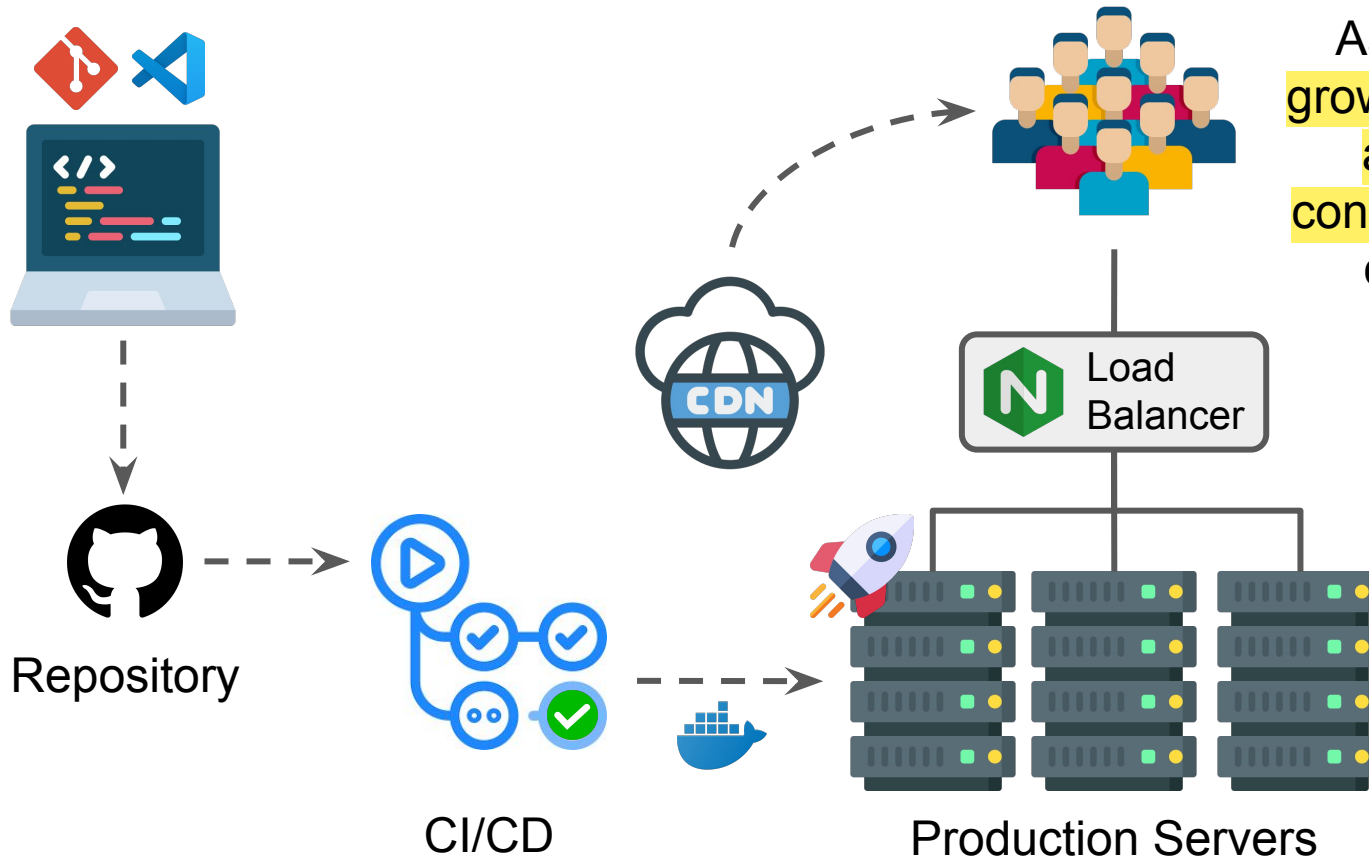

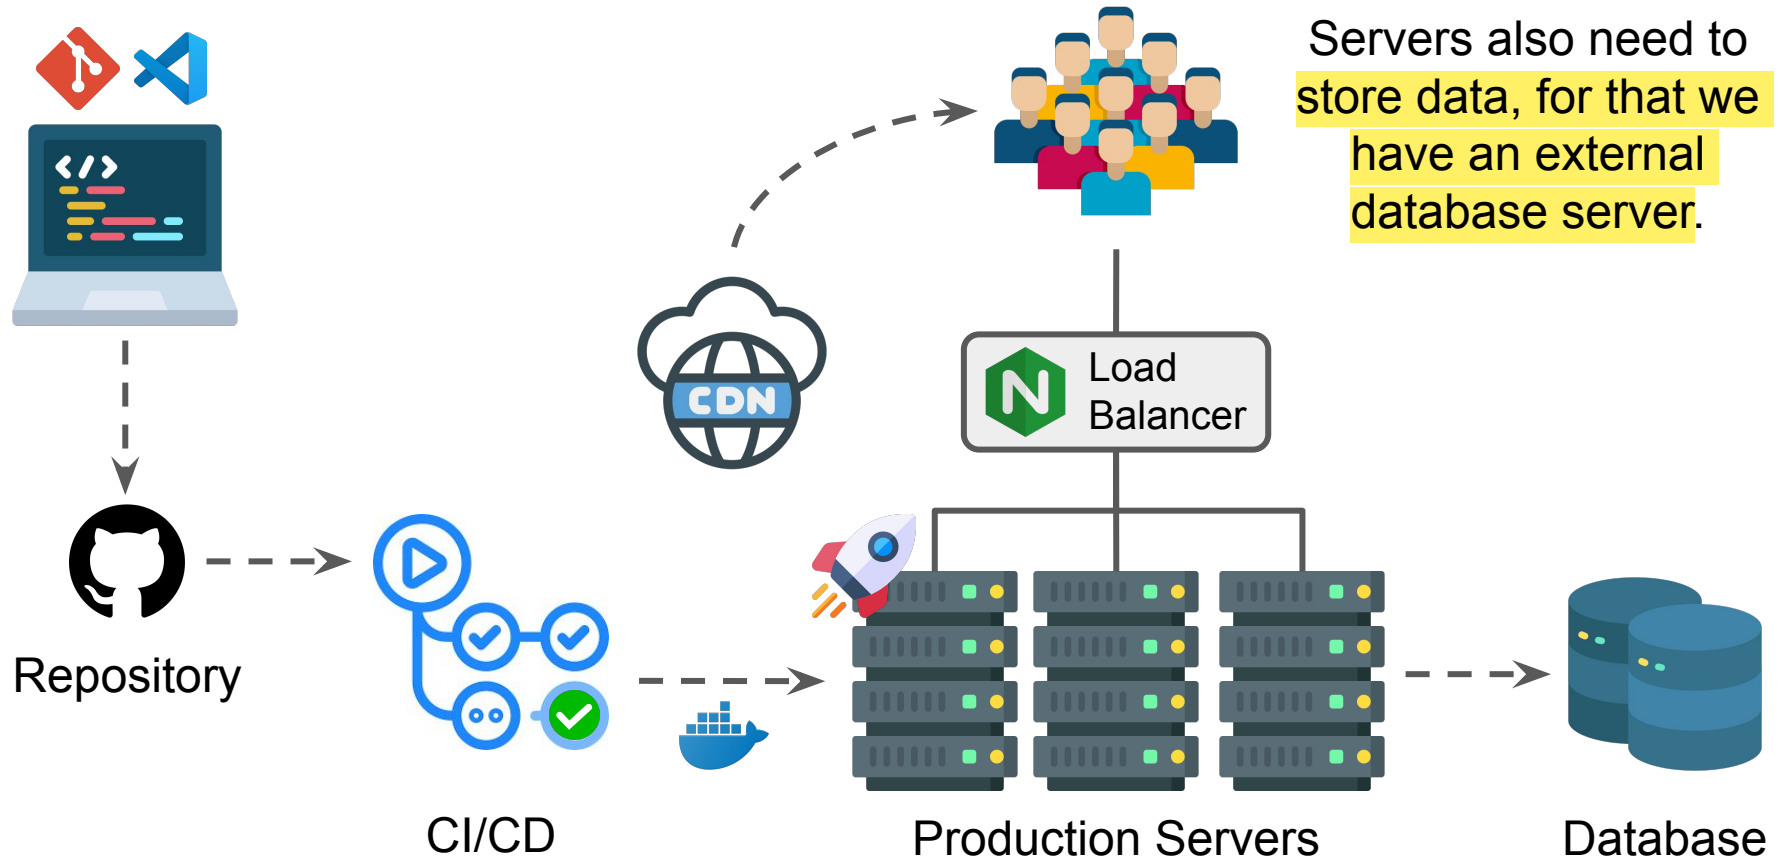

Production Servers

This is managed by
our load balancers.

CSE 325: Information System Design

 Instructor: Mahir Labib Dihan

Introduction

Mahir Labib Dihan
Lecturer, CSE, BUET

Introduction
Lecture 1

API Design

Mahir Labib Dihan
Lecturer, CSE, BUET

API Design
Lecture 2

Source Control Systems

Mahir Labib Dihan
Lecturer, CSE, BUET

Source Control Systems
Lecture 3

Software Containerization

Mahir Labib Dihan
Lecturer, CSE, BUET

Software Containerization
Lecture 4

CI/CD Pipeline

Mahir Labib Dihan
Lecturer, CSE, BUET

CI/CD Pipeline
Lecture 5

Client-Server Architecture

Mahir Labib Dihan
Lecturer, CSE, BUET

Client-Server Architecture
Lecture 6

Reverse Proxy

Mahir Labib Dihan
Lecturer, CSE, BUET

Reverse Proxy
Lecture 7

Software Deployment

Mahir Labib Dihan
Lecturer, CSE, BUET

Software Deployment
Lecture 8

Caching and CDN

Mahir Labib Dihan
Lecturer, CSE, BUET

Caching and CDN
Lecture 9

Database Design

Mahir Labib Dihan
Lecturer, CSE, BUET

Database Design
Lecture 10
