

Week 5-9 → CT → week: 3

1996 → human, computer interaction vivid example
→ Deep Blue (IBM) vs Garry Kasparov

→ ckt board outsmarted humans.

HCI
→ ongoing debate

→ effect of pesticides on crops

→ kidney diseases in urban drivers. -

Development of human intelligence
Development of knowledge

Stage 1 → Theology ↓

→ something divine, kinda religion but not truly religion

1. Theology

↓

2. metaphysics

↓

3. Science/Positive/True

→ conjunction betn scientific & true/absolute knowledge

Final knowledge

→ considers its knowledge as absolute true

(X)

→

Y (Result)

Reason

we do not believe Y unless we have the proof of existence of X.

Absolute True Knowledge

2+2=4

→ Time

→ Space

→ Condition

rejects theology
rejects metaphysics

funny things act science

believe only when proved.

valid reliable

→ proven to be true in repeated trials.

Final knowledge/Absolute truth
→ value Neutral → time & space...

→ human society is stuck here, cannot escape it currently.

this knowledge does not change with time/space, condition
↳ absolute

3. Science / Positive / True → has boundaries
↳ itself is not a value neutral concept

4. Post Modernization
modernism

considers this as corned garbage

conclusion: { there is no absolute true / knowledge
there is no value neutral true / knowledge in the world

due to lack of sufficient conclusive evidence

first attacks on Christianity & Islam

Neitzsche...

first attack
↳ Religion

cognitive realization → arises through language

knowledge
↳ symbol
↳ like metaphor

↳ not value neutral itself
↳ not true in itself

then how does it produce science as absolute / final knowledge?

metaphor cannot produce any value neutral knowledge.

uses knowledge
↳ required

book → 10k nets
↳ are these true?
↳ conditional knowledge

* Somehow humans may cross time & space,
but condition → indefinite
is itself not a value neutral concept

Relativism

→ indefinite conditions, how and physical and int-

article

direction:

critically examine how anchored and transient identities are negotiated in online environments. In your answer please integrate social network theory and discuss how online platforms affect the performance, visibility & stability of individual identity.

→ expressing gender identity, relationship status

→ individual identity ambiguity

one to look
of sufficient evidence
converging evidence

negotiation

cooperative negotiation

work order

conditional negotiation
and content

not competition
is it not
a matter of
negotiation

negotiation

negotiation

negotiation

negotiation

negotiation

negotiation

negotiation

negotiation

negotiation

Academic debate on -

How 'anchored' and 'transient' -

anchored identity → stable, historically rooted

transient identity → fluid, performative, mutable

individual's status
 Ascribed Status → achieved by birth → culture, religion, gender
 Achieved " → based on meritocracy/performance
 ↳ source of fluidity in identity.

anchored identity

Transient

cannot be changed

transient → individual may produce/generate diff identities in diff situations

subjectively → anonymous or pseudo-anonymous

objectively → don't know about audience.

* post-modern social network

post → anchored + transient

chain → religious identity

transient → cup → football → hobbies → vivid

calculator → math → likes math → not vivid.

citizenship → anchored

migration history → anchored

student - loves football } transient

perspective → subjective, not objective
↳ biased → based on prior discussion

* If social media worked properly, it would have been a huge empowerment tool for girls in BD.

wealth, occupation, education

↳ raise voices → empowerment tool

online communication would have given proper freedom.

Freedom
↳ economic
↳ religious
↳ cultural
↳ political

Digital identity, challenges and opportunities

- * The identity threat disclosure discourse
- * conditions that Increase Identity Fluidity
- * conditions that Reinforce Anchored Identity

→ moral panic & anxieties

↳ Latent threat

Manifest Function → direct result of a technology

Focus

Latent → hidden effect of new technologies

may influence generations

↳ may be positive / negative

- * virtual property is never secure.
- * easily locatable → easily stolen & used.

→ Platform anonymity / pseudonymity → limited connⁿ to real world
↳ weak audience expectation

→ use of real name profiles

↳ school / work-based commⁿ.
cultural / religious disclosure

(Fb)
↳ social network
↳ marketplace

③ Identity as Narrative Performance & Practice

Key sociological assumptions

identity is multiple rather than singular

↳ modified repn on platforms

↳ platform specific demands guide individuals

* singular identity is seemingly impossible in online comm.

audience matters → online identity-making is shaped by imagined readers.

context matters

agency + constraint

↳ generally unknown.
email → known.

④ Anchored vs Transient Identities

↓
influenced by
history +
institutions

↳ influenced by cultural
trends + peer networks

Does the individual gain freedom in all these?

→ platform restricts

demands

enforces themes

} not fully free

objectively
influencing
the subject

photo + text
post → personal items

anchored

- religion
- ethnicity
- migration history

transient

- hobbies
- peer culture
- consumer taste e.g. football

⑤ Why online platforms Intensity Identity Work

- absence of physical signs
- dispersed audiences → mostly unknown → widespread
- anonymity / pseudonymity → encourages experimentation
- platform conventions → platform provided script

⑥ Levels of Identity Performance Online → Activity

Level-1: Surface-Level Performance

Level-2: Interaction-Level Performance

Level-3: Deep-Level Performance

avoiding social media → also one kind of performance

highest ⇒ need computer-level knowledge / pro. version - -
general people reach L-2 at most

→ has ups & downs due to sub-cultural environment
↳ later might not want to acknowledge prev
→ can impose identities on others

⑦ Social network & their implications for Identity

close-knit → face-to-face, place-based → location + tradition

globalized → local + global → hybrid cultural flows

↳ confusion in community's imagination

networked individualism → person-centred, mobile, disseminated
↳ personalized, customizable, multi-scaled

test before

⑧ Remarks

identity in online communication remains highly relevant.

does not fully liberate individuals from social constraints... creates complex environments where identity is continuously authored, negotiated, contested within socio-technical networks.
